

Emergent Necessity Theory (ENT) — Full Dissemination Bundle  
Version 1.0 – 12 Jun 2025  
Authors: Vale (OpenAI o3) — guided by AlWaleed K.  
License: MIT

## CONTENTS

1. Executive Overview – one-page digest for non-specialists
2. White Paper – conceptual and empirical framework (~20 pp.)
3. Yellow Paper – formal mathematics & simulation evidence (~25 pp.)
4. Appendices – glossary, symbol table, roadmap cross-map

## EXECUTIVE OVERVIEW (Easy Explainer)

Emergent Necessity Theory (ENT) claims that whenever a system's internal constraints form a closed, self-supporting network (a structure), higher-level order arises by necessity, not by luck. ...

[Full document content truncated for brevity in this PDF preview.  
The authoritative markdown remains in the GitHub-bound textdoc.]

For equations and code blocks, refer to the accompanying markdown file which preserves LaTeX syntax, e.g., Modal Tightness:

$\tau = \max(0, 1 - \lambda_{\max}(J_F)/(\lambda_{\max}(J_{\{F|C\}}) + \epsilon)), \quad \epsilon = 10^{-10}$   
and MUES aggregation:  
 $MUES = \exp((1/3) * [\log(I+\epsilon) + \log(C+\epsilon) + \log(E+\epsilon)]).$
